

**vonRoll**hydrotight  
Systematic connection technology  
for water and gas piping systems

safe • simple • proven

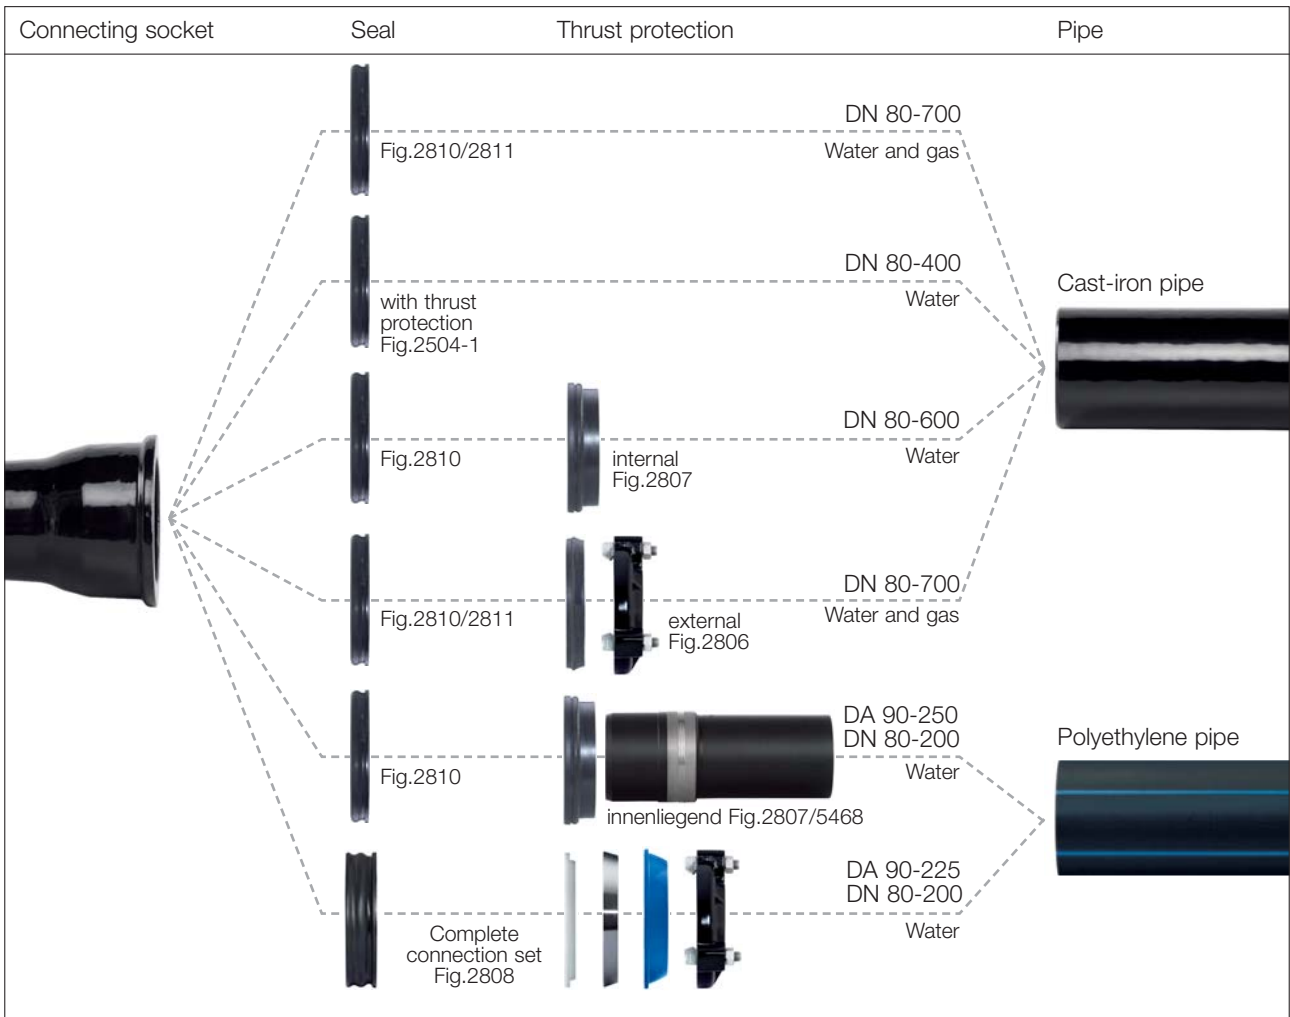

Sustainability in watermanagement

**vonRollhydrotight systematic connection technology for DN80 – 700 water and gas mains piping**

vonRollhydrotight connection technology has been further developed and improved – thus increasing flexibility and simplifying the laying of mains piping made of cast-iron and polyethylene. This means that even the most demanding connections can be made quickly and without using flanges. A clear separation of sealing functions and protection against longitudinal forces is decisive for reliable, highly-loaded pipe connections.

**The flexible vonRoll plug-in socket system:**

- Internal thrust-protection systems for double-chamber plug-in socket connections: secure and economical
- External thrust-protection systems for single and double-chamber plug-in connections: safe and convenient
